

# Contract for Grand Junction Arboretum

We propose to make an android mobile application for the Grand Junction Arboretum with the following understandings:

What we propose to make and/or do:

*We will make an android mobile application for the Lincoln Park Tree Tour. The app will contain information about each tree such as name, average height, flowers, and more. There will also be pictures for the trees in their different seasons. We will have a demo ready by April 20.*

What we need from Company to accomplish this task

*We need time to meet as ideas emerge to go over details and get feedback to make sure everyone is on the same page. We will need access to whatever data is necessary about the trees such as pictures, audio, etc. by April 1.*

What will happen when these guidelines change

*Requirements naturally change during the development of a project, but these changes must be agreed upon and may affect what components are delivered in the end.*

What we expect in compensation

*You will be giving us a grade for our work on this project, and it will have a substantial impact on our overall grade for our Software Engineering course.*

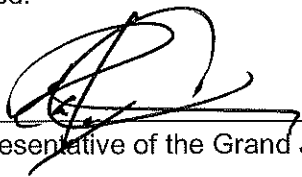

What limitations we have

We are a student team, and this is a student project. This project comes with no particular guarantees, including in particular warranty or suitability for a particular purpose, or long-term support.

Ownership and Fair Use of Intellectual Property

The Intellectual Property created during this project (for example software, business processes, and artwork) is granted permanently for use and extension for the business owner but is ultimately owned by the respective creator(s) who are not limited to reuse or extend this work elsewhere.

Signed:

A handwritten signature in black ink, appearing to be 'J. Boese', written over a horizontal line.
